

# Magic Water How it works:

## How SAIW Works?

### Surfactant Infiltration

Surfactant  
Infiltration

Alkaline Ionized Water molecules became small improving osmosis and spreading quickly along the interface of dirt and the surface of the object.

### Abrasion / Dispersion

The + ions of dirt are surrounded by - ions of the Alkaline Ionized Water rendering the surface of object from + ion to - ion. Exfoliating the dirt from the objects

Abrasion  
•  
Dispersion

### Emulsification Separation

Emulsification  
•  
Separation

Dirt surrounded by - ions is quickly separated emulsified.

### Converting into Soap

Dirt, oils and fat are combined to become a form of liquid soap and maintain a degree of detergency despite still looking dirty.
